

Guidelines for Data Upload

For better results and visualisations

- The uploaded file should contain comma-separated-values i.e the file should be a **CSV** file.
- The last attribute (column) of the data file should be targets or labels corresponding to the tuple.
- The file size should not exceed **1 GB** in total size.
- Any bogus or radically unexpected data entry in a tuple might lead to the elimination of the tuple or the complete attribute set.
- We currently do not support files which contain raw byte data.
